GREEN ENERGY

Renewables Shaping the Energy Landscape

Green Energy - Renewables Shaping the Energy Landscape

Problem Statement:

How can Hindustan Petroleum Corporation Ltd. (HPCL) diversify its energy portfolio by transitioning from traditional fossil fuels to cleaner and renewable alternatives, such as biofuels, hydrogen, compressed natural gas (CNG), and synthetic fuels? Proposals should offer innovative strategies for production, scaling, and efficient utilization of alternative fuels while identifying new market opportunities to enhance HPCL's operations and competitive edge in the renewable energy sector.

Subsections to explore:

- Developing methods to produce and scale alternative fuels
- Modifying existing infrastructure to support the integration of renewable fuels
- Addressing the intermittency of renewable energy through storage solutions or hybrid system
- Exploring partnerships and market trends to expand HPCL's presence in the renewable energy landscape

Deliverable:

Participants are required to submit a **2-slider PowerPoint presentation**, structured as follows:

Slide 1: Overview of the proposed solution, with a focus on the development and scaling of alternative fuels (biofuels, hydrogen, CNG, synthetic fuels). Explain how the solution helps HPCL transition from traditional energy sources and what market opportunities it opens up.

Slide 2: Implementation strategy detailing how HPCL can modify its current infrastructure to efficiently integrate and utilize these alternative fuels, while managing issues like intermittency through storage or hybrid systems. Include recommendations for partnerships and market trends that will drive HPCL's renewable energy growth.

Optional: A **2-minute pitch video** highlighting the key points of the solution, including its potential to diversify HPCL's portfolio and transform its operations through the adoption of alternative, cleaner energy sources.
