SUSTAINABILITY

Practices in energy operations for reducing environmental impact

Sustainability - Practices in energy operations for reducing environmental impact

Problem Statement:

How can Hindustan Petroleum Corporation Ltd. (HPCL) reduce its environmental impact across its core energy production, refining, petrochemical, and distribution processes? Proposals should focus on strategies and technologies that minimize carbon emissions, water usage, and waste generation, ensuring that HPCL meets its sustainability goals while maintaining operational efficiency.

Subsections to explore:

- Utilizing circular economy principles to reduce waste and resource usage
- Integrating carbon capture, utilization, and storage (CCUS) technologies
- Innovations in water management and recycling in energy production
- Breakthrough technologies that enable sustainable refining and distribution practices

Deliverable:

Participants are required to submit a **2-slider PowerPoint presentation**, formatted as follows:

Slide 1: Overview of the proposed solution, with a focus on the specific sustainability practices or technologies (e.g., circular economy, carbon capture, water recycling) that will reduce HPCL's environmental footprint in refining, petrochemicals, and distribution.

Slide 2: Practical implementation plan, demonstrating how the proposed strategy can be integrated into HPCL's existing operations while maintaining efficiency and minimizing costs. Include expected environmental and operational benefits such as reduced emissions, water usage, and waste generation.

Optional: A **2-minute pitch video** presenting the key aspects of the solution, emphasizing its potential to help HPCL achieve its sustainability goals through innovative and practical methods that enhance both environmental and operational performance.
